

Paving the Path Towards Society: Demystifying Technologies for Computational Thinking

Computational thinking (CT) is an essential skill for the 21st century. It is the ability to understand and solve problems using computational tools and techniques. CT is not just about coding or programming; it is about using technology to solve real-world problems.

Unfortunately, many people are intimidated by technology. They may not understand how it works or how to use it. This can lead to a lack of confidence in using technology, which can hold people back from reaching their full potential.
